

Professional Learning Course

Transforming Digital Classrooms for Student Success (Grades 7-12)

An interactive online course that empowers middle and high school teachers to effectively deliver virtual instruction

Teachers will learn to:

- Utilize learner-centered instructional strategies, tools, and engaging experiences needed to encourage active learning and interaction.
- Understand course design considerations for a variety of learners and their families in a variety of situations.
- Demonstrate awareness and empathy for the online learner experience.
- Apply techniques for building community in online and blended learning environments.
- Create appropriate quantitative and qualitative assessment tools, which allow learners the opportunity to demonstrate mastery of the content.

"The course was a worthwhile endeavor. The lessons and assignments on student/family communications were timely - I was able to design a turnkey welcome resource for our Zoom Open House that answered many parent/guardian questions and set the tone for a positive year of remote learning."

Bev Sklar, Instructional Literacy Coach

Interactive Course Design

This course was developed by several of the nation's leading experts on education technology, online learning, and the transition to remote instruction. Learning modules are built around a framework of Discover-Discuss-Demonstrate, to ensure that participants have the opportunity to engage with course concepts and link those concepts to practices in their classrooms. Participants who complete the course will receive a Professional Development certificate of completion and a badge indicating they are prepared to be online or blended teachers.

Learning in Small-Group Cohorts

These are interactive, facilitated courses modeling how educators can implement a variety of research-based strategies to engage their own students in online and blended learning environments. Courses will be hosted in an online learning portal where teachers can progress through course material on their own time and engage with other participants.

Guidance by Expert Facilitators

EdisonLearning's staff of 50+ expert online teachers serve as the course facilitators. Our teachers go through a rigorous training and onboarding process and follow standardized online teaching practices based on Quality Matters and the National Standards for Quality Online Teaching. With 167 years of combined online teaching experience and over 80 teaching certifications combined, our team is ready to help your school succeed.
